

TRUCK-MOUNTED PILE DRIVERS

The pile driver mounted on the bed of a truck is particularly indicated for road maintenance works. The mobility and the ability to load piles and safety barriers, in addition to the signs necessary for a construction site, make the truck-mounted pile driver a winning solution for short jobs located some distance from each other.

The accessories designed for our pile drivers can all be used on truck-mounted pile drivers too.

An important feature of our pile drivers is that they can also be mounted on a crawler at a later date.

Therefore, customers, buying the truck-mounted pile driver for maintenance works, in the future may buy just the crawler in order to also have a self mobile pile driver for more demanding jobs.

We made the BASIC, SMART, and HEAVY DUTY versions to allow them to be mounted on trucks with different capacities.

BASIC
600/800

SMART
600/800

HEAVY
DUTY
800/1000

TECHNICAL DATA

MODELS:		600	800	600	800	800	1000
